Introduction

This is a rules-lite hack of [Kids on Bikes](#) for use in a Star Wars setting. The intention of this system is to create a simple framework for telling shared, improvised stories with your friends. It is not intended as a simulationist engine for highly tactical gameplay. The emphasis should always be on having fun, moving the story forward, and player agency in service of the story.

Dice Mechanics

Jedi on Tauntauns uses all the standard polyhedral dice, except the d100. In all situations where you roll dice, rolling the maximum value of the die allows you to roll the die again, adding the second result cumulatively (i.e. dice explode). Dice may explode any number of times. The result of the roll is compared to either a target number or the result of a competitor's roll.

In general, the margin of success on a check should determine the scale of the outcome. If you succeed by a wide margin, you will have much more success than if you only just barely succeeded on the check. Similarly, just barely failing a check is not as bad as failing by a wide margin. The impact of a success or failure on a check should also take into account the scale of the action. Failing to chat up the barman will have much less impact than failing to convince the guards that you do actually belong in this high-security facility, even for the same margin of failure.

Standard Checks

A standard check is any check not covered by a more specific set of rules. When you make a standard check, the GM sets a target number for the check. You then roll your die for the Stat called for by the GM. If the result of your roll meets or exceeds the target number, you succeed on the check. Otherwise, you fail the check.

Contested Checks

A contested check is called for when two or more characters in a scene are competing over the outcome of an action. To resolve a contested check, each character makes a roll with the Stat they are using for the check (as determined by the GM). The highest result is the victor. Tied results represent a stalemate, and do not count as failures.

Planned Actions

If a character is under no time pressure or stress when they make a check, they may make that check as a Planned Action. When making a Planned Action an actor may:

- Take half of the maximum die value for the Stat being used, instead of rolling the die (i.e. d10 -> 5, d12 -> 6, etc.)
- Receive help from other players, who spend can their Destiny Points (see below) to grant a +1 bonus to the roll

Twist of Destiny

Anytime a character rolls a 1 on a die, they automatically fail the check as the will of the Force turns against them and some outside influence causes their attempt to go awry. This outside force could be anything from a stormtrooper showing up at an inopportune moment to deflector shields coming back

online just before their attacks land, or anything else. The intention is that this is an outside force preventing their success, not a failure on their part to succeed.

Destiny Points

Whenever a character fails a check of any kind, they receive a Destiny Point. By default Destiny Points can be spent in the following ways:

- Add a +1 bonus to any of that character's rolls
- Add a +1 bonus to a Planned Action of another character

Any number of Destiny Points can be spent on a single roll. The bonus for Destiny Points is applied as specified in the Bonuses and Penalties section below. Feats may add additional uses for Destiny Points.

A character may have no more than 5 Destiny Points at any time. If Destiny Points would be gained past 5, they are instead lost immediately.

Destiny Points do not carry over between sessions.

Bonuses and Penalties

Spending Destiny Points and some Feats will provide bonuses or penalties to your checks. Both bonuses and penalties are applied after the roll is complete and before you evaluate success or failure. This means that they cannot make a die explode or prevent a die from exploding.

Characters

Characters in *Jedi on Tauntauns* are intentionally simple so that players can focus on the roleplaying and storytelling without getting bogged down in dice rolls. As the Stats discussed below are broadly defined, it is up to the player to decide in what ways it is reasonable for their character to employ those statistics.

Mechanically, each player is composed of seven Stats and any number of Feats. Each Stat will have a die size assigned to it. Additionally, Feats may provide bonuses or penalties to Stats, additional uses of Destiny Points, or other actions for characters.

Stats

There are seven stats, listed with explanations below, that govern all of the checks that you might make as a character in *Jedi on Tauntauns*. Each stat is defined by its die size (i.e. d4, d6, d8, d10, d12, d20), though the Force Sensitivity Stat is potentially 0. All Stats other than Force Sensitivity start at d4 and are improved by moving up die sizes during character creation and any Improvement Phases. Stats are listed below with descriptions of the types of activities they cover.

Force Sensitivity

The Force Sensitivity Stat is unique in that it defaults to 0, meaning that it cannot be used in a check. Once this Stat has a die size assigned, you will use this Stat for any checks that involve the use of the Force, whether that's in manipulating objects, persuading people, or sensing presences.

Athleticism

The Athleticism Stat determines the physical conditioning (i.e. how strong and fast) of a character. This Stat covers any check that involves physical activity and does not involve combat. This is everything from running fast to sneaking around on foot to lifting heavy objects to playing sports and beyond.

Brains

The Brains Stat determines the book-smarts of a character. This Stat covers any check to recall knowledge, solve intellectual problems, understand languages, or perform medicine.

Charm

The Charm Stat determines how socially adept a character is. This Stat covers any check to read other characters, lie, cheat, persuade, or interact with sentient and non-sentient creatures.

Technician

The Technician Stat determines how well your character is able to work with technology and handle vehicles, regardless of scale or type. This Stat covers any check to manipulate/modify/repair technology, pilot a vehicle, or modify/repair vehicles.

Fight

The Fight Stat determines how competent a character is in combat scenarios. This Stat covers any check related to aggressive action in combat. This Stat may also be used in place of Charm in some social situations when intimidation is used.

Grit

The Grit Stat determines how durable your character is. This Stat covers any check to resist an aggressive action in combat, as well as to resist environmental or psychological hazards. Grit may also be used for checks that rely on how street-smart a character is, whether that is navigating a slum or surviving in a sandstorm.

Perception-style Checks

You may notice that there is no skill that covers the types of actions typically covered by perception or insight-style checks in other systems. Instead of having a dedicated skill for those actions, players can expect to make checks using the skills relevant to the situation or type of information they are seeking. Some examples include:

Kalon wants to see if the door he is about to enter is trapped. The GM will ask Kalon for a Technician roll, because any trap would rely on technology.

Sira wants to track her quarry across a marsh. The GM will ask Sira for a Grit roll, because tracking another character is a street-smarts skill.

Threx wants to know if the smuggler is lying to them. The GM will ask Threx for an opposed Charm check against the smuggler, as this is a social situation.

The intention with having perception and insight-style checks handled in this manner is that it allows players to lean into their strengths while keeping the mechanics simple.

Feats

Feats are additional abilities characters can accrue that provide bonuses, create new actions, or otherwise manipulate the rules for your character. The intention of Feats is to help you make your character your own by capturing aspects of the character that aren't covered by the Stats of the character. Generally, it is encouraged that you create your own feats that are personalized to your character. You should work with your GM to ensure the Feats you create are fun and at an appropriate power level for the kind of campaign you are playing.

Fun Feats generally do more than add bonuses to a character's die rolls (though that is fine too!). They might help pull in new NPC contacts, highlight a character's skills in specific social situations, or grant combat abilities that are a little out there. Introducing new constraints on a character along with the upsides of a Feat can also be a fun roleplaying exercise and give the character some more life.

To help get started with creating Feats, some example Feats are listed below.

Feat	Cost	Description
Favored Weapon	2 IP	Pick a type of weapon. When you make a Fight check with that type of weapon, you get a +2 bonus to that check. When you make a Fight check with a different type of weapon, you take a -1 penalty to that check.
Big Backpack	2 IP	You have a big backpack filled with useful objects. You may spend 1 Destiny Point to retrieve common object that could have fit in the backpack without having previously stated you acquired it. Because your backpack is so filled with random items, you take a -1 penalty to any Athleticism checks you make.
Snitch	1 IP	Spend a Destiny Point to locate and receive help (within reason) from law enforcement in any settlement with a problem involving a crime.
Underworld Connections	1 IP	Spend a Destiny Point to get an introduction to an underworld figure.
My Hunk of Junk	1 IP	Pick a specific vehicle. When you make a Technician check for that vehicle, you get a +2 bonus to that check. When you no longer possess that vehicle, you fall into a deep funk.
Excellent Assistant	1 IP	When you spend Destiny Points on an ally's Planned Action, each Destiny Point you spend provides a +2 bonus.
Fated	3 IP	When you fail a check you receive two Destiny Points instead of one.
Nerves of Steel	1 IP	When you make a check that is not a Planned Action, you may spend 1 Destiny Point to take half of your die's value instead of rolling.
Infamous	1 IP	When you make a Charm check against underworld targets, you get a +2 bonus to that check. When you make a Charm check against a figure of authority, you take a -2 penalty to that check.
Guardian	2 IP	When a nearby ally would advance their Injury Level, you may spend two Destiny Points to advance your Injury Level instead.
Tough	2 IP	You have two Minor Injury Levels before your Major Injury Level.

Feat	Cost	Description
Will of the Force	3 IP	Once per session you may choose to spend your Destiny Points during your roll, instead of after the roll. This means that you may spend Destiny Points to cause a die to explode.
Fast Disguise	1 IP	If you are unobserved, you may spend 1 Destiny Point to completely change your appearance.
Legal Action	2 IP	When you attack an enemy, you may instead quote from relevant local legislation and ordinances. Make a Brains check contested by Grit. If you succeed, your enemy is put into a stupor.
Junkyard Special	1IP	Your cybernetic leg is a patchwork of old parts and questionable repairs. Once per scene, flip a coin. If it comes up heads, gain a +2 bonus to your next Athleticism or Fight check that involves your leg. If it comes up tails, take a -2 penalty on your next Athleticism or Fight check that involves your leg.

Injury Levels

All player characters have five Injury Levels by default. These levels are as follows:

1. Uninjured
2. Minor Injury
3. Major Injury
4. Unconscious
5. Dead

When a character has a Major Injury, they receive a -2 penalty to all checks. An Unconscious character automatically fails all checks except Grit checks, to which they receive a -4 penalty.

Harm

Generally, aggressive actions are resolved with a Contested Check with the aggressor rolling Fight and the Defender rolling Grit. If the aggressor succeeds, the defender advances to the next Injury Level (i.e. Uninjured -> Minor Injury -> Major Injury etc.).

Healing

When a character has an Injury Level, they can generally reduce their Injury Level by benefitting from a successful Brains check. Additionally, they can recover once a sufficient amount of time has passed.

Character Creation

As with all RPGs, it is important to have a concept for when creating a character. In *Jedi on Tauntauns* it is particularly important to have a strong idea of the character that you would like to play, since you are responsible for coming up with many of the mechanics of the character.

Once you have determined the character concept for the character you wish to play, you will build your character by following these steps:

1. Pick a species for your character. Work with your GM to decide on a Stat that should be increased by one die size based on your selected species and to create a Feat specific to your

species that you gain for free.

2. Every character starts with a pool of 14 Improvement Points (IP) to spend on Stats and Feats.

Distribute your 14 IP by spending them in any of the following ways:

1. Spend 1 IP to increase a Stat by 1 die size, up to d12
2. Spend 2 IP to increase a Stat from d12 to d20
3. Spend IP equal to its cost to gain a Feat of your choice

When creating a character you should spend your IP on both Stats and Feats. Having lots of Stats and few feats may lead to your character feeling a bit flat, as they will not have much mechanical flavor to them. Having lots of Feats and not very many Stats could be an interesting character, but would likely feel bad to play, as your character would be bad at everything they tried.

Improvement Phases

Improvement Phases are times where you can improve your character. A GM will typically grant an Improvement Phase after some milestone has been reached in your story. Whenever you enter an Improvement Phase, you are granted 2 additional IP. You may then spend any IP you have (including leftover IP from character creation or previous Improvement phases), as defined in the Character Creation section above.

Gear

Gear is exclusively narrative. This means that while you may need a specific piece of gear to be allowed to perform some actions, gear does not provide any Stat or other bonuses beyond that.

Please note that these rules intentionally do not provide a system for tracking currency. It is up to you and your GM to decide what role, if any, currency plays in your story.

Vehicles

Vehicles are similar to, but not the same as characters. Every vehicle is defined by its Modules. These Modules modify the set of five Specs that determine how good a vehicle is at specific activities. Each of these Specs covers a range of activities you might perform while using the vehicle. Each Spec is a bonus or penalty that is applied to a character's roll whenever they make a Stat check to perform an activity using the vehicle. Beyond modifying the Specs of a vehicle, Modules can add additional functionality to the vehicle and serve as the vehicle's health bar.

Specs

Specs define the performance characteristics of a vehicle. All Specs start at a value of 0 and cannot provide a bonus of more than 3. A Spec also cannot impose a penalty below -3. Specs are modified by the Modules that you have installed on the Vehicle.

Speed

Speed covers activities related to the speed of the vehicle, typically outrunning other vehicles or traveling between places. Checks related to the Speed Spec are typically performed with a Technician Stat check.

Maneuverability

Maneuverability covers activities related to maneuvering the vehicle, like navigating through tricky spots or losing pursuing craft. Checks related to the Maneuverability Spec are typically performed with a Technician Stat check.

Firepower

Firepower covers aggressive activities performed with your vehicle. This includes everything from firing your quadlasers to ramming an opposing vehicle. Checks related to the Firepower Spec are typically performed with a Fight Stat check.

Durability

Durability covers how well your vehicle stands up to the wear and tear of use. This means everything from taking a turbolaser impact to getting in a fender bender. Checks related to the Durability Spec are typically performed with a Technician check.

Systems

Systems covers activities that are related to the use of specific Modules in place on your vehicle that are not covered by another Spec. This means everything from the sensors to the medical bay to the cloaking device to the astronav. Checks related to the Systems Spec are typically performed with a Brains check.

Modules

Every vehicle has a number of Modules that provide additional capabilities. Modules typically come in one of three broad categories:

1. Modules that change Spec bonuses and penalties
2. Modules that add functionality to the Vehicle
3. Modules that change the way characters interact with the Vehicle

Examples of these Modules are listed below, but it is highly encouraged that you work with your GM to design additional new Modules to suit the needs of your party.

Module	Cost	Description
Maneuvering Jets	1VP	Increase this vehicle's Maneuverability Spec by 1.
Improved Maneuvering Jets	2VP	Increase this vehicle's Maneuverability Spec by 1.
Jury-Rigged Shields	1VP	This vehicle's got deflector shields, granting a +1 bonus to Durability. However, they draw too much power, imposing a -1 penalty to Speed when they are active.
Cargo Bay	1VP	This vehicle can carry cargo.
Laser Turret	1VP	This vehicle has a laser turret and can fire lasers while the turret is manned
Ion Cannon	2VP	This vehicle has an ion cannon. When you hit an opposing vehicle with the ion cannon, make a contested Systems check against the

Module	Cost	Description
		opposing vehicle. If you succeed, temporarily disable a random Module on that vehicle.
Armor Plating	1VP	This vehicle has armor plating that will prevent some damage to the other parts of the vehicle.
Distinctive Livery	1VP	This vehicle is painted in a distinctive livery. If this livery is associated with a particular organization, you receive a +2 bonus to Charm checks related to that organization while in or near the vehicle. This vehicle receives a -2 penalty to checks while trying to pretend to be a different vehicle.
A Hydrospanner a Day...	1VP	One or more characters may spend a full day wrenching on this vehicle. For one week or until this vehicle is next damaged (whichever comes first), this vehicle receives a +1 bonus to all Specs.

If you are creating Modules that provide a flat bonus to a Spec, each Module should cost 1 more VP than the previous Module (i.e. the first costs 1VP, the second costs 2VP, and the third costs 3VP).

Starting Modules

As discussed below in the vehicle creation section, all vehicles will start with some number of Modules based on their Class. All starting Modules have a VP cost of 0. These starting modules are detailed below:

Module	Description
Engine	The engine allows the vehicle to move.
Cockpit	The cockpit allows the vehicle to be driven.
Life Support	The life support allows the vehicle to keep crew alive in a vacuum or other harsh environment.
Hyperdrive	The hyperdrive allows the vehicle to travel faster-than-light.
Crew Quarters	The crew quarters provides a comfortable place for the crew to rest and relax.
Escape Pods	The escape pods allow you to get off the vehicle in a hurry if you need.

Vehicles and Damage

Unlike characters, vehicles track damage using their Modules. Whenever a vehicle takes damage, one of its Modules is destroyed. When a vehicle has no remaining Modules, it is destroyed. This does not necessarily mean that it explodes or ceases to exist - it may simply be disabled or drifting in space without any power.

As Modules are destroyed, they no longer provide their effects.

Repairing Vehicles

It is possible to repair destroyed Module given enough time. To fully repair a destroyed Module, characters may make one or more Technician checks and spend the appropriate amount of time (typically a more than a day) performing the repairs if the parts they need are accessible. Alternately, players may spend 1 Vehicle Point to have someone else repair the destroyed Module.

Vehicle Creation

Creating vehicles is very similar to creating characters. Vehicles are created out of a pool of 5 Vehicle Points (VP). To create the mechanical profile of the vehicle, follow the following steps:

1. Pick a vehicle. Work with your GM to determine the vehicle Class from the table below if there is some question. The vehicle Class will determine the Modules your vehicle starts with.
2. Distribute your 5 VP by spending them on Modules.

For larger vehicles or particularly advanced vessels, a GM might grant additional VP when creating the vehicle.

Vehicle Classes

Each Vehicle starts with the Modules provided by its Class. These are intended to show the minimum functionality of the Vehicle, and to provide more specific systems to be damaged, should your Vehicle end up in combat.

Class	Example Vehicles	Description	Starting Modules
Terrestrial Vehicle	Speeder Bike, T-47 Airspeeder	Vehicles that don't leave atmosphere	Engine, Cockpit
Small Starship	X-Wing, TIE Fighter	Vehicles that wouldn't be comfortable to live out of	Engine, Cockpit, Life Support
Medium Starship	YT-1300, Wayfarer	Vehicles on which you could spend extended periods of time	Engine, Cockpit, Life Support, Hyperdrive, Crew Quarters
Large Starship	Star Destroyer, Nebulon-B	Vehicles that require more than just the PCs to operate	Engine, Cockpit, Life Support, Hyperdrive, Crew Quarters, Escape Pods

Vehicle Improvement

A Vehicle Improvement is a chance to increase the capabilities of your vehicle. Typically a GM will give a party a Vehicle Improvement as a reward for accomplishing in-game missions, acquiring sufficient in-game wealth, or spending in-game time working on the vehicle. Whenever a party gets a Vehicle Improvement they are granted 2 additional VP. You may then spend any VP you have (including leftover VP from vehicle creation or previous Vehicle Improvements) on repairing destroyed Modules or acquiring new Modules.

Gamemastering

Your foremost role as Gamemaster (GM) for *Jedi on Tauntauns* is to facilitate your group having fun and telling interesting stories. This means that while you should probably have a core plot in mind, you are

not the only person in the group responsible for creating story elements. Let the group get distracted by an off-the-cuff NPC or a wild hare the party wants to chase. Having players add to the world and the plot through their actions or suggestions is a great way to spice the game up for yourself as well! If a player rolls really well, let them decide what happens as a result and abide by the decisions they made.

Facilitating the storytelling also means getting the group back in motion if they are flagging. The party gets bogged down deciding what to do after the first step of their 15 step plan to rob the crime boss falls flat? Get them back in action by throwing a new, immediate problem at them. Try to avoid letting a single failure stop the whole story in its tracks. Maybe failing to crack the security system means they can't get through the vault door quietly anymore, but it certainly doesn't mean they can't use excessive force to get through it, damn the consequences.

Now on to some more mundane advice.

Setting Target Numbers

When you ask a player for a Stat check, it is frequently going to be a standard check against a target number (TN). Reference the below table to help determine what those target numbers should be. The die size columns list the percentage chance that a player with that die size will pass a check with that target number, ignoring any modifiers.

TN	Rough Difficulty	d4%	d6%	d8%	d10%	d12%	d20%
1	Impossible to fail	100	100	100	100	100	100
2	Easy	75	83.33	87.5	90	91.67	95
3	Easy	50	66.67	75	80	83.33	90
4	Easy	25	50	62.5	70	75	85
5	Moderate	25	33.33	50	60	66.67	80
6	Moderate	18.75	16.67	37.5	50	58.33	75
7	Moderate	12.5	16.67	25	40	50	70
8	Hard	6.25	13.89	12.5	30	41.67	65
9	Hard	6.25	11.11	12.5	20	33.33	60
10	Hard	4.69	8.33	10.94	10	25	55
11	Hard	3.13	5.56	9.38	10	16.67	50
12	Very Hard	1.56	2.78	7.81	9	8.33	45
13	Very Hard	1.56	2.78	6.25	8	8.33	40
14	Very Hard	1.17	2.31	4.69	7	7.64	35
15	Very Hard	0.78	1.85	3.13	6	6.94	30
16	Formidable	0.39	1.39	1.56	5	6.25	25

TN	Rough Difficulty	d4%	d6%	d8%	d10%	d12%	d20%
17	Formidable	0.39	0.93	1.56	4	5.56	20
18	Formidable	0.29	0.46	1.37	3	4.86	15
19	Almost Impossible	0.2	0.46	1.17	2	4.17	10
20	Almost Impossible	0.1	0.39	0.98	1	3.47	5

Granting Improvement Phases and Vehicle Improvements

Generally, you should grant Improvement Phases when the party has accomplished a major goal or had a significant learning experience. This might be after they successfully complete a daring raid or survive a close encounter with an Imperial patrol. Parties also don't have to succeed in their stated mission to deserve an Improvement Phase. They might have learned a lot about smuggling, even if they end up getting shipped off the the spice mines after getting caught.

If players take no Feats, they require 42 IP to max out their Stats, so you do not have to worry much about giving out too much IP. That said, keep an eye on the power level of characters and make sure it feels appropriate for the story you are telling. You can always adjust the pace at which you grant IP.

Vehicle Improvements are the closest thing that *Jedi on Tauntauns* has to a currency system. In general, parties should get Vehicle Improvements as rewards for jobs they do in-game. Maybe that crime boss offers them upgraded shields as part of their deal with him. Maybe they take their winnings from the casino and plow them back into their ship. Maybe they steal a new data core on a mission and install the AI on it in the ship's mainframe. Whatever the reason, Vehicle Improvements should be awarded to reflect material gains made by the party.

Examples

Example Character Build

Alex decides they wants to play a Wookie enforcer for a small-time crime boss named Nyysh. Since they have decided on playing a Wookie, they starts by working with their GM to determine which Stat should start at d6. Together, they decide that Athleticism will start at d6 to reflect the natural strength of Wookies.

Next, Alex and their GM come up with a starting Feat for Wookies. They decide to make a new Feat:

Feat	Cost	Description
Fearsome Strength	N/A	When you make an Athleticism check based on strength, each Destiny Point you spend increases your result by 2 instead of 1.

Now that Alex and their GM have decided on the Stat boost and Feat from being a Wookie, it is up to Alex to decide how to spend their 14 IP to complet building Nyysh.

Since Alex wants Nyysh to be a very competent fighter they spend 6 of those points to increase Nyysh's Fight Stat to a d20. This requires them to spend 4 points to reach d12 (d4 -> d6, d6 -> d8, d8 -> d10, and d10 ->d12) and 2 points to reach d20 (d12 -> d20).

Then, Alex spends 2 points on Nyysh's Grit to bring it up to d8, 1 point on Athleticism to bring it up to d8. Alex puts 1 point into Charm to bring it up to d6. Then Alex puts 2 points into Technician, since they want to represent Nyysh's driving skills, which brings Nyysh's Technician Stat up to d8.

With their last 2 points, Alex decides to take two Feats. The first, Underworld Connections, is described above, and represents the connections Nyysh has formed while working in the underworld. The second Feat is another that Alex makes up and gets approved by their GM, Aggressive Demeanor.

Feat	Cost	Description
Aggressive Demeanor	1 IP	When you use Athleticism to try to intimidate a target, you receive a +2 bonus to that check. If you fail that check, the target is much more likely to react with violence.

This completes the mechanical character creation process for Alex's character. In the end, Nyysh will have the following profile:

Force Sensitivity	Athleticism	Brains	Charm	Fight	Grit	Technician
0	d8	d4	d6	d20	d8	d8

Feat	Cost	Description
Fearsome Strength	N/A	When you make an Athleticism check based on strength, each Destiny Point you spend increases your result by 2 instead of 1.
Aggressive Demeanor	1 IP	When you use Athleticism to try to intimidate a target, you receive a +2 bonus to that check. If you fail that check, the target is much more likely to react with violence.
Underworld Connections	1 IP	Spend a Destiny Point to get an introduction to an underworld figure.

Example Vehicle Build

Now that Alex has created Nyysh it is time to create Nyysh's vehicle. Since Nyysh frequently needs to travel around the system to carry out his boss's orders, he has a Z-95 Headhunter named Dagoon.

Because of the size of Dagoon, its Class will be Small Starship. This means that it will start with the following Modules:

Module	Description
Engine	The engine allows the vehicle to move.
Cockpit	The cockpit allows the vehicle to be driven.
Life Support	The life support allows the vehicle to keep crew alive in a vacuum or other harsh environment.

Next, Alex decides that Nyysh since Nyysh has the need for speed, he will have upgraded the engines in Dagoon, as well as the maneuvering jets so that it is a particularly nimble craft. This adds two new Modules to Dagoon:

Module	Cost	Description
High-Thrust Engines	1VP	Increase this vehicle's Speed Spec by +1
Maneuvering Jets	1VP	Increase this vehicle's Maneuverability Spec by +1

Because Nyysh sometimes runs into tough customers as part of his work and he doesn't have the money for nice ones, he's chosen to fit a set of dodgy deflector shields and twin laser cannons:

Module	Cost	Description
Jury-Rigged Shields	1VP	This vehicle's got deflector shields, granting a +1 bonus to Durability. However, they draw too much power, imposing a -1 penalty to Speed when they are active.
Twin Laser Cannons	1VP	These twin laser cannons allow you to engage targets from your Vehicle without rolling down the window.

Lastly, Nyysh wants some comfort while cruising around, so he has installed a fancy layflat pilot's chair in Dragoon.

Module	Cost	Description
Layflat Pilot's Chair	1VP	This comfy chair allows you to sleep comfortably on long passages in this Vehicle.

Pulling this all together now we can see that Dragoon has the following Modules:

Module	Cost	Description
Engine	0VP	The engine allows the vehicle to move.
Cockpit	0VP	The cockpit allows the vehicle to be driven.
Life Support	0VP	The life support allows the vehicle to keep crew alive in a vacuum or other harsh environment.
High-Thrust Engines	1VP	Increase this vehicle's Speed Spec by +1
Maneuvering Jets	1VP	Increase this vehicle's Maneuverability Spec by +1
Jury-Rigged Shields	1VP	This vehicle's got deflector shields, granting a +1 bonus to Durability. However, they draw too much power, imposing a -1 penalty to Speed when they are active.
Twin Laser Cannons	1VP	These twin laser cannons allow you to engage targets from your Vehicle without rolling down the window.
Layflat Pilot's Chair	1VP	This comfy chair allows you to sleep comfortably on long passages in this Vehicle.

Now that we have the full list of Modules on Dragoon, we can calculate the Specs of the vehicle by tallying up the various bonuses and penalties provided by the Modules. If we calculate the Specs of Dragoon with the shields turned off we get the following:

Speed	Maneuverability	Firepower	Durability	Systems
+1	+1	0	0	0

However, if we calculate them with the shields turned on we get:

Speed	Maneuverability	Firepower	Durability	Systems
0	+1	0	+1	0
